

# Organisation Units

# Organisation Units

- Represents the administrative/organisational units
  - Facility, clinic, hospital (unit providing services)
  - Province, district (administrative unit)
  - Division, department
- Located inside a hierarchy
- Reflects administrative structure and levels
- Data is aggregated/rolled up through the hierarchy
  - Aggregate by any level (depends on where data is entered)

# Example: TrainingLand

## Trainingland

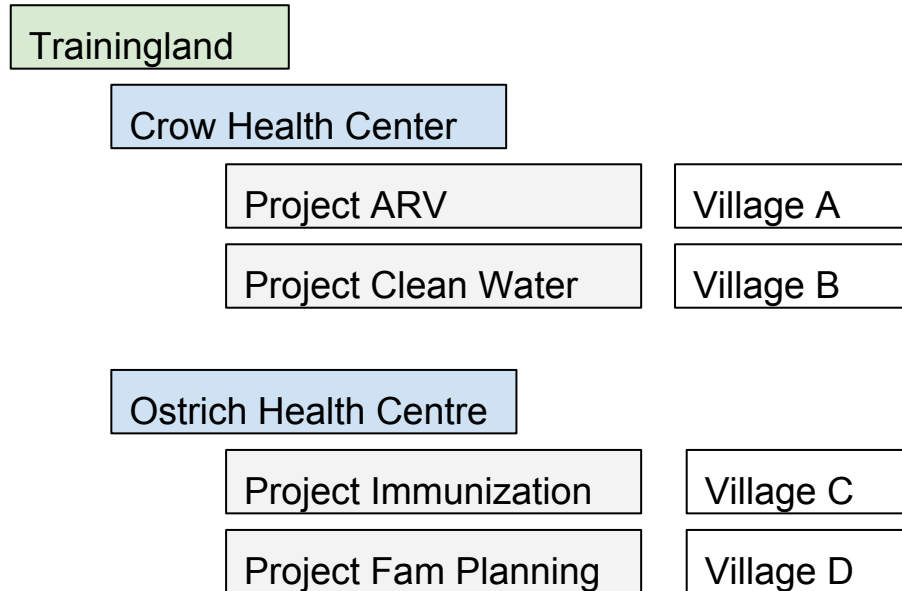

## Levels

National  
Region  
District  
Facility

# Design Don'ts

Don't mix multiple concepts in the hierarchy

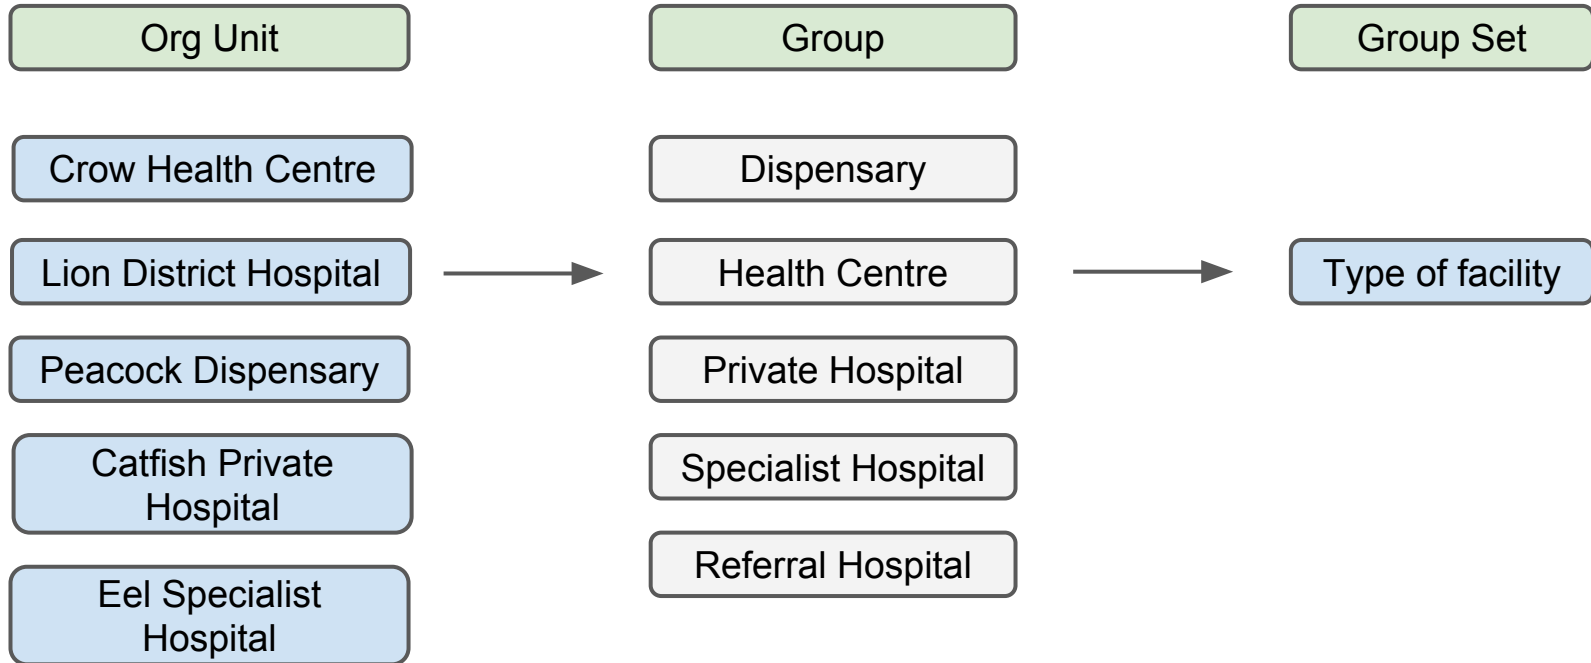

If Project ARV  
starts up in  
Ostrich Health  
Centre then  
what?

# Org Unit Group Sets

- Classification of org units
  - Org units can be grouped into *groups*
  - Org unit groups can be grouped into *group sets*
- Used for data analysis
  - Each group set becomes a data dimension
  - An org unit can only be member of one group per group set
  - This allows for building alternative hierarchies for the purpose of data analysis

# Example: Types of facilities

# Example: Facility Location
