

Tracker Programs

Introduction

DHIS2 Tracker Overview

- The DHIS2 Tracker is an extension of the DHIS2 platform allowing for collection of individual information.
 - Supports management, data collection, and analysis of transactional or disaggregated data
- Individuals can be enrolled into longitudinal and chronic programs
 - Visits can be scheduled
 - Automated SMS reminders can be sent
 - Missed appointments can be tracked

Tracker Description

- Tracker programs can have multiple stages or single stages similar to an event; however ***they must*** be attached to a registered entity
- Multiple stages can be defined (types of visits) for a program through the user-interface allowing for people/commodities etc. to be tracked through each stage until completion of program
- The Person Dashboard can be used to get overview of a client's status in a program
- Transactional data can be collected, automated aggregation queries can be made and the aggregated data warehouse can be populated directly all within DHIS2

Tracker Programs - Examples

Single Events

- Maternal Deaths
- Birth Registration

Multiple-Events

- Pregnant Mother through ANC, Delivery and PNC
- Child through first 2 years of care
- Lab Samples
- Patients receiving ART Treatment

Tracker Example - Antenatal Care
